1. Introduction

This Business Requirements Document (BRD) outlines the requirements for the KBZ LIFE Insurance Agency Sales Digital Platform. This platform aims to modernize and streamline the agency sales process, enhance field-force productivity, improve performance tracking, and ultimately drive sales growth. The platform comprises two key components: a native mobile application for Financial Advisors and Team Leads (Financial Advisor & Team Lead App), and a web-based Management Portal for performance monitoring and analytics.

2. Business Objectives

The primary business objectives of the KBZ LIFE Agency Sales Digital Platform are to:

- Increase sales through streamlined quoting and electronic application (e-application) processes.
- Enhance the productivity of Financial Advisors (FAs) by providing a unified tool for CRM and daily task management.
- Drive performance through real-time, hierarchical performance data visibility for Agency Managers (AMs), Senior Agency Managers (SAMs), District Managers (DMs), Assistant Area Development Managers (AADMs), Area Development Managers (ADMs), Senior Area Development Managers (SADMs), Regional Area Development Managers (RADMs), and Heads of Agency (HOAs).
- Improve client retention through timely premium due and renewal reminders.
- Boost recruitment efforts through effective pipeline tracking.

3. Scope

3.1. In Scope

The following functionalities and components are included within the scope of this project:

- **Mobile Application:** A mobile application for iOS and Android platforms, designed for use by agent users.
- **Responsive Web Portal:** A responsive web portal accessible via modern web browsers, intended for use by authorized users.
- **Role-Based Access Control:** Secure access control mechanisms to restrict access to platform features and data based on user roles.
- **Product Coverage:** Support for all KBZ Life Insurance products.
- **Core Modules:**
 - Customer Relationship Management (CRM)
 - Product Information
 - Learning Resources
 - Quoting Tools
 - Electronic Application (e-Application)
 - Task Management

- Hierarchical Performance Tracking
- Notification Management & Announcement
- Reporting
- **Secure API Integrations:** Secure Application Programming Interfaces (APIs) for integration with existing KBZ Life systems.
- **Offline Functionality:** Offline access to key mobile features to ensure continuous productivity in areas with limited or no internet connectivity.
- **Dual Language:** The system must support two languages, MM and ENG.

3.2. Out of Scope

The following functionalities and components are explicitly excluded from the scope of this project:

- Full policy administration, including financial processing.
- Support for non-life and health insurance products.
- A client-facing version of the application.
- Direct commission payment processing.
- Group proposal and person/entity functionality.

4. Stakeholders and User Roles

4.1. Stakeholders

The key stakeholders involved in this project are:

Stakeholder Name	Role	Department
Han Win Hlaing	CEO	Sponsor
Khaing Zar Oo	Business Owner	Agency Sales Channel
Kyaw Ko Khaing	Business Owner	Operations
Shinn Thant	Functional Support	IT Department
May Thuzar Theint	Project Manager	IT Department
Agents	Primary Users (Mobile and Web)	Agency Sales Channel

4.2. User Roles and Platform Access

The platform supports a range of agency and management users across the sales hierarchy, as well as Super Admin users. It is designed to serve both field execution and management oversight needs through two connected channels: a mobile app and a web management portal.

Users access features based on their assigned role, hierarchy, and permissions rather than a fixed static profile. This means a user's visible dashboards, reports, data access, and available actions can change dynamically according to the role currently assigned in the system. For example, a user may be granted access to personal sales functions, team oversight capabilities, or higher-level reporting views depending on their position and authority within the agency structure.

- **Field and frontline sales users** use the mobile app to manage leads, clients, quotations, e-applications, tasks, announcement, notifications, and personal performance.
- **Management and supervisory users** use the web portal to monitor team performance, recruitment, persistency, productivity, and operational indicators across their hierarchy.
- Some roles, such as **Manager Roles**, may require access to **both mobile and web platforms** because they perform both operational and supervisory responsibilities.
- **Administrative users** manage user access, permissions, and selected system configuration functions through controlled back-office access.

The system role model must be **dynamic**, the solution should apply role-based and hierarchy-based access control at login and throughout the user session. Each user should only see the menus, data, KPIs, workflows, and records permitted for their role and reporting structure. If a user's role changes, their platform access, action level and functional visibility should update accordingly without requiring a separate account design.

5. Detailed Functional Requirements

The following section details the functional requirements for the KBZ LIFE Agency Sales Digital Platform.

5.1. FR-01: Secure Login and Authentication

- **App Registration:** If the mobile number does not exist in the CORE system, the user shall not be allowed to self-register through the mobile application and shall instead be directed to the Application List in the Backend Portal for further handling. If the mobile number exists in the CORE system and the record is active, the user shall be allowed to proceed with registration.
- **Unified Login:** A secure login mechanism with a unified login experience across both mobile and web platforms.
- **SMS OTP:** Implementation of SMS-based One-Time Password (OTP) authentication via an internal KBZ Life API.
- **Session Timeout:** Automatic session timeout after a period of inactivity to enhance security.
- **Forgot Password:** A "Forgot Password" feature that allows users to reset their password through the SMS OTP, with mandatory remark/reason for password reset.

5.2. FR-02: Role-Based Dashboards

The dashboard data, including all calculated values, will be provided by KBZ LIFE through APIs. The vendor's scope of work is limited to the design, development, and delivery of the frontend dashboard for displaying the data supplied via the APIs.

5.2.1. Dashboards

Component Name	Component Details
Policy Count	No. of New Policy Count and Existing Active Policy Count
First Year Premium	Both Initial FYP and Subsequent FYP. Comparison in % with last month and average productivity.
APE / AFYP	For the new policy, Installment premium x payment mode. Comparison with last month and average productivity
Due Amount Vs Collected Premium	For the particular month, we will show • no. of dues • due amount vs collected premium amount
Commission	For phase 1, we will display product commission. For UL, we might have the additional commission for the agent.
K1 Persistency	K1 measures the percentage of policies that remain active

(Policy count)	exactly one year after they were issued. To show the Grace Period in the report.
K2 Persistency (Policy count)	K2 measures the percentage of policies that remain active exactly one year after they were issued. To show the Grace Period in the report.
Persistency (Policy count)	- Total Policies: 1,000 policies including lapsed, early surrender (Denominator) - By Jan 2025 (13th month), 600 policies are still active. (Numerator)
Persistency (Premium Amount)	- Same 1,000 policies, but not all have the same premium: - Start premium: \$1,000,000 total (Denominator) - At 13th month, remaining premium: \$550,000 (Numerator)
Road to MDRT (Premium/Commission)	MDRT Premium and Commission.

5.2.2. Core Data (The Metrics)

To ensure consistency across all dashboard levels, weighting factors apply to **Freelance FYP, Internal FYP** calculations.

5.2.2.1. Weighting Logic for Freelance FYP Calculation

The dashboard data, including all calculated values, will be provided by KBZ LIFE through APIs. The vendor's scope of work is limited to the design, development, and delivery of the frontend dashboard for displaying the data supplied via the APIs.

5.2.2.2. Weighting Logic for Internal FYP Calculation

The dashboard data, including all calculated values, will be provided by KBZ LIFE through APIs. The vendor's scope of work is limited to the design, development, and delivery of the frontend dashboard for displaying the data supplied via the APIs.

5.2.3. Freelance Management Dashboard (Mobile App)

5.2.3.1. Team Sales Performance

- **Aggregate Summary:** A high-level "Summary Card" displaying the manager's total team performance (Actual vs. Target) for APE, FYP, Subsequent FYP, and Weighted Freelance FYP.
- **Performance Toggles (Direct vs. Indirect):**
 - **1st Level:** Can toggle to "Personal Team" to see direct-report FAs.
 - **2nd Level:** Can toggle to "Total Group" to see indirect performance (e.g., SAM sees AMs under them; DM sees SAMs and AMs in their entire hierarchy).
- **MDRT Tracker:** A dedicated tracking table showing progress toward MDRT status for each FAs of both direct and indirect teams.
- **Drill-Down:** Tapping any subordinate's name opens a detailed view of their individual agent performance card.

5.2.4. Executive Oversight Dashboard (Web Portal)

5.2.4.1. Manager View

Scope: Management of the DM's specific District/Portfolio.

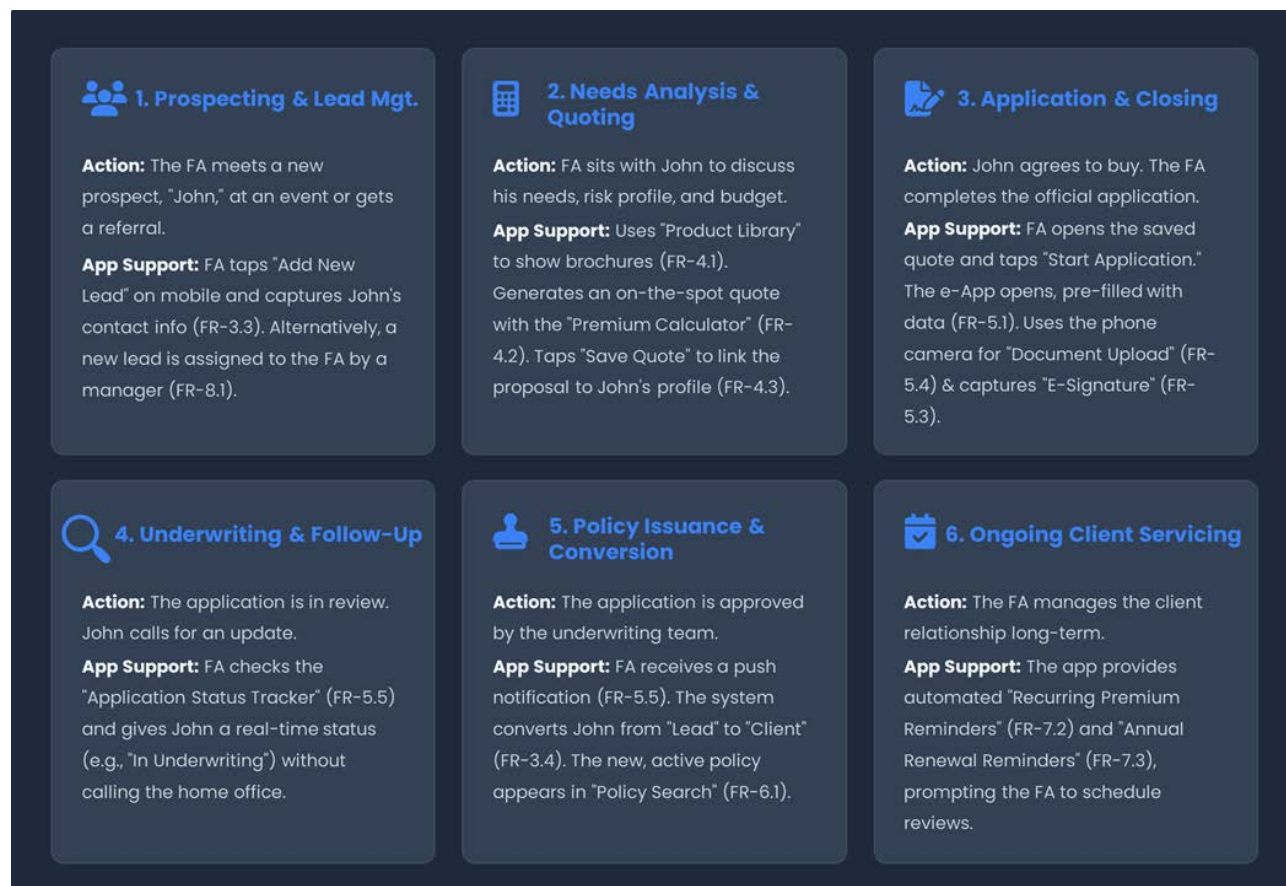

- **New Proposal Tracking:** Real-time tracking of new proposals submitted within the district.
- **Hierarchical Filtering:** Multi-level filters.
- **Line-by-Line details:** A detailed data table showing production for every individual FA (APE, FYP, Subsequent FYP, Weighted Freelance FYP, and MDRT Premium).
- **Target Variance Alerts:** Automated "Red Flag" system for any FA or Manager performing below setup % of their set target "FYP per month".
- **Export:** One-click "Export to Excel" for all sales and production data.

5.2.4.2. FTE Employees

Scope: Full-time executive oversight of all company districts.

- **Global Proposal Tracking:** Ability to track new proposals across his/her portfolio.
- **Advanced Multi-Level Filter:** Full drill-down:
- **Full Performance (All Data Points) & Persistency View:** Line-by-line production data for every FA in the portfolio, including **K1/K2 Persistency ratios**.
- **Target Variance:** Portfolio-wide reporting on underperformers (below setup % target)
- **Export:** Full data set export capability to Excel.

5.3. FR-03: FA's End to End Sales Process

FR-03: Client and Lead Management (Mobile)

Requirement	Description	User Role	Platform
Client & Lead Lists	Two separate, searchable lists: 1. Clients: Existing policyholders. 2. Leads: Prospects who have not yet purchased.	Authorized User	Mobile
Lead Management	Functionality to add/edit leads and convert leads to clients upon successful policy insurance.	Authorized User	Mobile
Client Profile	Comprehensive client profiles including contact information, active/lapsed policies, family members/associated contacts, notes/activity logs.	Authorized User	Mobile

5.4. FR-04: Single Product and Quoting (Mobile)

Requirement	Description	User Role	Platform
Product Library	A read-only library of all Life & Health products, with access to benefit summaries, brochures, and rates. Only points which is related products must be shown in the product library. Integration with the Core system for the product code and naming.	Authorized User	Mobile
Premium Calculator	A step-by-step tool for FAs to generate an accurate premium estimate for a specific product based on client inputs. Integration with the Core system for the pricing data.	Authorized User	Mobile
Save Quote	Ability to save a generated quote and link it to a client or lead profile.	Authorized User	Mobile
Integration	Integration with the Core system for real-time product and pricing data.	Authorized User	API

5.5. FR-05: Single Product Sales and e-Application (Mobile)

Requirement	Description	User Role	Platform
Start e-Application	Ability to start a new, full electronic application (e-App) from a client profile or a saved quote. Related master data will be provided by the KBZ LIFE API.	Authorized User	Mobile
Pre-fill Data	When starting from a quote, the e-App must pre-fill all known data (e.g., client name, product, premium).	Authorized User	Mobile
KYC Validation	Ability to validate the KYC data after scanning/upload NRC from mobile for policy holder, insure person and beneficiary. (OCR integration is optional)	Authorized User	Mobile
E-Signature Capture	Ability to capture the client's (and agent's) signature directly on the mobile device screen.	Authorized User	Mobile
Document Scan/Upload	Ability to use the phone's camera to scan and attach required documents (e.g., National ID, Medical documents) to an application.	Authorized User	Mobile
Application Status Tracker	A dedicated, searchable list for the FA to track the real-time status of all submitted applications (e.g., Draft, Submitted, Mark for Correction, Approved, Rejected).	Authorized User	Mobile

5.6. FR-06: Policy and Servicing (Mobile App)

Requirement	Description
Policy Search	FA can find any of their clients' policies.
View Policy Details	A read-only view of an active policy (E.g.; coverage (SI), beneficiary, premium amount, Next due date).
Integration	Integration with the Core system for policy data.

5.7. FR-07: Task Management (Mobile App)

Requirement	Description	User Role	Platform
Task Management	Assigned tasks shall be displayed in a calendar view within the application. Agents shall be able to view all assigned tasks through the mobile application or portal. Agents shall receive notifications when new tasks are assigned or when existing tasks are updated.	Authorized User	Mobile
Task Report	The calendar view shall allow agents to view tasks by day, week, and month.	Authorized User	Mobile
Daily Task	A "To-Do" list where FAs can create, view, and complete tasks, and link them to specific tasks.	Authorized User	Mobile
Add/Manage Task	Ability for managers to Add/Move/Delete the new tasks in the backend system. E.g.; Managers can create the agent recruitment and track with onboarding status.	Authorized User	Web
Task Status	Agents shall be able to update the status of assigned tasks (e.g., Pending, In Progress, Completed) based on their permissions.	Authorized User	Mobile + Web

5.8. FR-08: Notification Management

Requirement	Description	User Role	Platform
Recurring Premium Reminders	Automated tasks/alerts generated for the FA when a client's recurring premium is due soon (e.g., in 7 days).	Authorized User	Mobile
Annual Renewal Reminders	Automated tasks/alerts generated for the FA well in advance of a client's policy renewal date (e.g., 60 days out) to allow for reviews.	Authorized User	Mobile
Notification Setup	User can setup the notification from backend system	Authorized User	Web

Notification	Delivery of push notifications for important updates and alerts.	Authorized User	API
Integration	Integration with the Core system for notification triggers.	Authorized User	API

5.9. FR-09: Announcement Management

Requirement	Description	User Role	Platform
Announcement Setup	User can setup the announcement from backend system	Authorized User	Web
Announcement	System must support the notification announcement with URL and Image.	Authorized User	Mobile

5.10. FR-10: Resource Center and Communication

Requirement	Description
Resource Library	(Mobile & Web) A central, offline-capable (for mobile) library for all product brochures, training documents, and company forms. All the sections must be available to configure from web portal.
Company Announcements	A read-only broadcast feed to push updates to all users.
Integration	This integration will implement with Mobile API for backend and mobile app.

5.11. FR-11: Agent Profile

- **Profile View/Edit:** Ability for agents to view and edit their profile information.
- **Quick Link:** Functionality to support the quick link from agent profile.
- **Profile Photo Upload:** Ability to upload a profile photo.
- **Change Password:** Functionality to change password.
- **Legal Agreements:** Access to terms & conditions and privacy policy.
- **Help & Feedback:** Access to help resources and feedback submission mechanisms.
- **Language Selection:** Support for English (ENG) and Burmese (MM) languages.
- **Product On/Off Control:** Ability to enable/disable specific products from the control panel.
- **Core Integration:** Integration with the Core system for agent data.

5.12. FR-12: Agent Data Change Workflow

1. The KBZ LIFE shall provide the Agent Data API for the agent data change:
 - Original Agent Data
 - Pending Agent Data Changes
2. Any Authorized user action, including data updates, status changes, or deletions, must be synchronized and pushed to the Agent Portal in real time or through the designated integration API (Core System).
3. The Backend Portal shall display the latest approved agent information and reflect all changes received from the administration system.
4. An audit trail shall be maintained for all agent data modifications, including:
 - Action performed
 - Previous and updated values
 - User who performed the action
 - Date and time of the change

6. Non-Functional Requirements

The following non-functional requirements must be met:

Requirement	Description
Performance - Mobile Screens	Mobile screens should load within 2 seconds.
Performance - Web Reports	Web reports should generate within 5 seconds.
Security	Encryption of data in transit and at rest.
Automatic Logout	Automatic logout after 7 days of inactivity.
Privacy & Security	The application must not allow the Developer Mode/ Jailbreaks/ root devices
Usability	Intuitive and user-friendly interface.
Data Handling	Export and filtering capabilities for data.
SQLite Database Encryption	The application shall encrypt the local SQLite database to protect sensitive data stored on the device from unauthorized access.
Document Storage Encryption	The application shall encrypt all documents and files stored locally on the device to ensure data confidentiality and protection against device compromise.
Device Registration and Authentication	The application shall support device registration and device-level authentication so that only authorized and recognized devices can access the system.

Remote Data Wipe	The application shall support remote wipe capability to remove locally stored application data from a registered device in the event of loss, theft, compromise, or deactivation.
Data Transmission Security	All data transmitted between the mobile application and backend services shall use HTTPS/TLS for secure transport. Additional payload-level encryption is not required when HTTPS/TLS is properly implemented, unless mandated by security policy or regulatory requirements.
Biometric Login/ Authentication	The application can support the biometric authentication, such as fingerprint or facial ID, for user convenience and faster access on supported devices.
Offline Functionality (Mobile)	Ability to view client lists and contact information, view product brochures, create new leads and tasks with automatic synchronization when online.
Platform Compatibility	Native iOS and Android mobile applications preferred. Responsive web design for modern browsers.
Audit Trail & Logging	Full trace log. The system must log all critical user actions. Each log entry must include the user ID, timestamp, action type, and reference ID . Logs must be securely stored and retrievable by authorized administrators for review and compliance purposes.

7. Business Process Overview

The platform should support the following business processes:

- **Agent Status:** Track agents task assign through various statuses, including:
 - Screening and Interview (Alliance Department)
 - Interview Passed (Alliance Department)
 - Pre-Contracted (Alliance Department)
 - LC Training (L&D Department)
 - Other Trainings (L&D Department)
 - NIIM Exam (L&D Department)
 - NIIM Exam Absence (L&D Department)
 - NIIM Exam Failed (L&D Department)
 - NIIM Exam Passed (L&D Department)
 - Final Contract in Progress (Alliance Department)
 - Final Contracted (Alliance Department)
 - Final Rejected (Alliance Department)
 - Interview Failed (Alliance Department)

Note: The system must support dynamic agent status management.

- **App Registration:** Separate app registration processes for new agents and existing agents.
- **Password Creation:** Secure password creation via SMS after admin approval.
- **Dashboard & Performance View:** Real-time performance monitoring through role-based dashboards.
- **Lead & Client Management:** Efficient management of leads and clients.
- **Policy Servicing:** Access to policy information and servicing tools.
- **Product Info & Quotation:** Access to product information and quoting tools.
- **Application Submission:** Streamlined application submission process.
 - Date format: DD-MMM-YYYY (e.g., 04-Jun-1999)
 - Allow the two digits decimal and comma separator for all amount values
 - Phone number must be allowed mobile format
 - Validate the Email format.
 - System must support the mandatory and optional filed validation.
- **Task Management & Notification:** Effective task management and notification system.
- **Announcement Management & Notification:** Effective announcement management system.
- **Commission Tracking:** Tracking of agent commissions.

8. Proposed Solution

The proposed solution comprises the following key modules:

- **Agent Profile Management:** Module for managing agent profiles and information.
- **Customer Management:** Module for managing customer data and interactions.
- **Lead and Prospect Tracking:** Module for tracking leads and prospects.
- **Policy Information Access:** Module for accessing policy information.
- **Quotation and Product Info:** Module for generating quotes and accessing product information.
- **Payment and Debit Note Reminder:** Module for sending payment and debit note reminders.
- **Task Management:** Module for managing tasks including recruitment processes.
- **Notification and Alert Management:** Module for managing notifications and alerts.
- **Dashboard and Reporting:** Module for providing performance dashboards and reports.
- **Security and Access Control:** Module for managing security and access control.

9. Rationalization/Data Reference

The following table outlines the data rationalization strategy:

Data Element	Source System
Product Code	Core System
Proposal/Quotation	Core System
Policy	Core System
Agent Code	Core System
Lead/Client	Agent Portal (backend system)
Announcement	Agent Portal (backend system)
Backend Notification	Agent Portal (backend system)

10. Success Metrics

The success of the KBZ LIFE Agency Sales Digital Platform will be measured by the following metrics:

- Mobile adoption rate: 90% weekly active users.
- Web adoption rate: 90% of active PMS/DMS using the web portal weekly.
- 30% reduction in paper application forms.
- 10% increase in on-time premium payments.
- 100% of new agent candidates tracked within the platform.

11. Assumptions

These are conditions assumed to be true for the project and solution to proceed successfully.

- **API availability:** Core systems and required services will expose stable APIs for integration, including hierarchy data, premium logic, policy information, and user-related data.
- **User hierarchy data is accurate:** Agency structure and role mapping from FA up to HOA will be maintained correctly in source systems.
- **Product and premium rules are available:** Insurance product details, eligibility logic, and quotation/premium calculation rules will be provided by the core systems.
- **Users will adopt the platform:** agent users, and management users will actively use the mobile app and web portal after rollout.

- **Devices and connectivity are sufficient:** Field users will have supported mobile devices; intermittent connectivity is expected, so offline capability will cover key activities until sync is restored.
- **Business stakeholders are available:** Agency Sales, Operations, IT, and approvers will participate in requirement clarification, UAT, and sign-off.
- **Security services are in place:** OTP service, encryption mechanisms, access control, and session management can be implemented within KBZ LIFE's technology environment.
- **Delivery will be phased/hybrid:** The project can be delivered in planned releases rather than requiring every feature at once.

12. Constraints

These are limitations that may affect delivery, scope, cost, or performance.

- **Project timeline:** Milestones and delivery dates are 01-Jan-2027.
- **Resource availability:** Key roles such as Project Manager, Business Analyst, QA Lead, Security Owner, and technical leads may not yet be formally assigned.
- **Legacy system limitations:** Existing core systems may restrict available data, API speed, real-time integration, or field validation rules.
- **Role complexity:** The solution must support multiple user roles and permissions across both mobile and web channels.
- **Performance expectations:** Mobile pages are expected to load in under 2 seconds and web reports in under 5 seconds, which may be challenging if upstream systems are slow.
- **Dual Language:** Label name of the Mobile application must be supported two languages, ENG, MM.
- **Offline requirement:** Offline support adds complexity for local storage, sync rules, conflict handling, and security.
- **Scope boundaries:** The platform excludes policy administration, non-life/health products, client-facing apps, commission payment processing, and group proposal/person-entity.

13. Dependencies

These are external or internal factors the project relies on.

- **Core system integration:** Required for customer data, hierarchy, product data, premium logic, policy information, and servicing data.
- **OTP and authentication services:** Needed for secure login and identity validation.
- **Back-office support process:** Required for password reset handling and certain operational support workflows.
- **Product team/business owners:** Must provide accurate product content, sales rules, and updated business policies.
- **Infrastructure readiness:** Environments for development, testing, UAT, and production must be available and stable.
- **Security and compliance review:** Required before go-live, especially for customer and sales data handling.

- **UAT participation:** Business users across agency hierarchy must test and validate workflows.
- **App store / enterprise deployment readiness:** Mobile deployment approach must be confirmed for iOS and Android distribution.

14. Risks

These are potential events or conditions that could negatively affect the project or business outcomes.

- **Incomplete or changing requirements:** Because the platform covers many roles and workflows, late requirement changes may increase cost and delay delivery.
- **Integration failure or delays:** If APIs are unavailable, unstable, or incomplete, core features such as dashboards, premium calculation, or e-application may not work properly.
- **Low user adoption:** Agents and managers may continue using manual processes if the platform is difficult to use or not seen as valuable.
- **Data quality issues:** Incorrect hierarchy, customer, or policy data can lead to reporting errors and low trust in the system.
- **Security/privacy risk:** Sensitive customer and sales data could be exposed if access control, encryption, or device security is weak.
- **Offline sync issues:** Duplicate records, missing updates, or data conflicts may occur when users reconnect after working offline.
- **Performance issues:** Slow dashboards, delayed reports, or lag in application workflows can reduce usability and adoption.
- **Training gaps:** Users may not understand new workflows such as e-application submission, policy servicing, or recruitment tracking.
- **Scope creep:** Requests to include excluded items such as commission payment or group policy administration could disrupt delivery.

15. Compliance / Regulatory Considerations

These are business and regulatory obligations the solution should respect.

- **Data privacy and confidentiality:** Customer personal information, policy information, and sales activity data must be protected.
- **Access control by role:** Users should only access information relevant to their level and responsibilities.
- **Secure authentication:** OTP-based login and controlled password reset processes should be enforced.
- **Auditability:** The system should maintain records of important actions such as login, application submission, status updates, and administrative changes.
- **Document retention and evidence handling:** Uploaded documents, signatures, and application records may need to be retained according to business and regulatory policies.
- **Approval and authorization control:** Sensitive actions, especially in servicing or administrative functions, may require defined authority and traceability.
- **Insurance business compliance:** Product presentation, application collection, and policy-related communications should align with internal insurance governance and any applicable regulatory standards.
- **Session/security policies:** Requirements such as 7-days inactivity logout should be enforced consistently.

If needed, this section can later be expanded with specific Myanmar insurance regulatory references once confirmed by Legal/Compliance.

16. Data / Reporting Requirements

These define what business data the platform must manage and what reporting it must support.

Data Requirements

- **User and hierarchy data:** Agents and Super Admin records, including reporting relationships.
- **Customer and lead data:** Contact details, lead status, prospect history, and client interaction information.
- **Product data:** Product descriptions, features, eligibility criteria, and pricing/premium rules.
- **Quotation data:** Quote inputs, outputs, timestamps, and related customer/product references.
- **E-application data:** Application forms, uploaded images/documents, signatures, status, and submission timestamps.
- **Policy servicing data:** Service request type, status, history, and related policy references.
- **Task and notification data:** Assigned tasks, reminders, due dates, alerts, and completion history.
- **Performance data:** FYP, APE, Persistency, MDRT indicators, commissions visibility.

- **Resource center data:** Learning content, downloadable documents, announcements, and training/reference materials.

Reporting Requirements

- **Role-based dashboards:** Metrics must be filtered based on user role and hierarchy.
- **Sales performance reporting:** Visibility into production, productivity, and trend performance.
- **Recruitment reporting:** Pipeline tracking, recruitment progress, and conversion visibility.
- **Retention/persistency reporting:** Indicators supporting follow-up and premium reminder actions.
- **Operational reporting:** Application status, pending servicing items, overdue tasks, and activity tracking.
- **Management reporting:** Consolidated hierarchy views for supervisory and head-office users.
- **Export and drill-down capability:** If required, reports may need filtering, drill-down, and downloadable views.

All report requirements are mentioned in the “**FR-02: Role-Based Dashboards**”.

17. Acceptance Criteria

These define what must be true for the business to accept the solution or major features.

- Users can log in securely using approved authentication methods, including OTP.
- Role-based access works correctly across mobile and web users.
- Dashboards display the correct KPIs for the correct user level.
- CRM, product information, premium calculator, e-application, servicing, tasks, announcement, notifications, and resource center functions operate as expected.
- Mobile users can perform approved key actions offline and sync successfully when reconnected.
- Required integrations return accurate data from core systems.
- Sensitive data is encrypted in transit and at rest.
- Session/logout behavior works according to security requirements, including inactivity rules.
- The system must support the SQLite database encryption, document storage encryption, device registration and authentication, Remote data wipe, data transmission security and Biometric login/authentication.
- Mobile performance meets target response expectations and web reports load within expected thresholds.
- UAT is completed successfully by designated business users.
- Defects identified during testing are resolved to agreed severity thresholds before go-live.
- Business owners formally approve the solution for release.

18. Implementation Considerations

These are key business and operational points to consider when planning rollout.

- **Phased rollout may be best:** Start with core sales and productivity features, then expand to more advanced management/reporting or servicing functions if needed.
- **Role-based deployment planning:** Mobile and portal users may need different rollout waves and support models.
- **Data readiness:** Master data quality should be checked before launch, especially user hierarchy, product data, and customer-related information.
- **Integration readiness:** API stability and response time should be tested early, not only near go-live.
- **Offline architecture:** Clear business rules are needed for what can be done offline, how long data can remain un-synced, and how conflicts are handled.
- **Support model:** Define who supports login issues, password resets, technical incidents, and business process questions after launch.
- **Change control:** Since the project has many stakeholders, requirement and scope changes must be tightly governed.
- **Pilot/soft launch:** A limited rollout to selected agency groups may reduce business disruption and help refine the solution.
- **Measurement after launch:** Adoption, usage, turnaround time, and performance should be tracked to confirm business value.

19. Training / Change Management

This explains the business readiness activities needed for successful adoption.

- **Role-based training is required:** FA users need simple, practical training focused on daily workflows; managers need additional training on dashboards, reporting, and oversight features; admins need training on controls and maintenance tasks.
- **Workflow-based training should be prioritized:** Users should be trained on login, lead management, quoting, e-application, servicing, tasks, announcement, notifications, and dashboard use.
- **Job aids and reference materials are important:** Quick guides, FAQs, short videos, and support materials can improve adoption.
- **Communication planning is essential:** Users should know what is changing, why it matters, when rollout happens, and where to get support.
- **Leadership sponsorship matters:** Agency leaders should reinforce usage expectations and encourage adoption.
- **Hypercare support is recommended:** Early post-launch support should be available to handle issues quickly and maintain user confidence.
- **Resistance management may be needed:** Some users may prefer manual or existing processes; targeted support and communication can reduce resistance.
- **Adoption tracking should be built in:** Training completion, login rates, feature usage, and feedback should be monitored.
